DETAILED ACTION

Applicants' response, filed 1/22/2008, has been received. Claims 1 – 47 are pending. Claims 9 – 11, 23, 29, and 44 – 46 are withdrawn. Claims 1 – 8, 12 – 22, 24 – 28, 30 – 43 and 47 are treated on the merits in this action.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 – 8, 12 – 22, 24 – 28, 30 – 43 and 47 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0 719 549 in view of US 5,145,684 to Liversidge et al.

Note that this new rejection was necessitated in part by the amendment of claims 1 and 47 to require that the surface stabilizer be adsorbed on the surface of the particle. The EP reference does not clearly teach this limitation.

The teachings of the EP reference were discussed in the previous office action on pages 4 and 5. The EP reference teaches neither the particle size nor that the surface stabilizer is adsorbed on the surface of the particle.

Liversidge teaches that drug particles are advantageously formed with surface modifier adsorbed on the particle surface, and that an ideal particle size is less than about 400 nm. Abstract. The advantages of these features are increased bioavailability and utility in methods of treating mammals.

It would have been *prima facie* obvious to a person of ordinary skill in the art at the time of the invention to make the particles of EP 400 nm or less, and to adsorb surface stabilizers thereon. Obviousness stems from Liversidge's suggestion that particular advantages, namely increased bioavailability and utility in methods of treating mammals, would result from this alteration. Because Liversidge teaches how to obtain particles having the requisite size and adsorbed surface stabilizer, the artisan would enjoy a reasonable expectation of success.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 1618

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
